

## Insects as alternative sources of protein for food and feed

Edited by Adriana Casillas, Tebrio, Spain

**burleigh dodds**  
SCIENCE PUBLISHING

### Publication date

17 Dec 2024

### Price

£150 / \$195 / C\$255 / €180 / A\$270

### ISBN

Hardback: 978-1-80146-584-7

ePub: 978-1-80146-585-4

PDF: 978-1-80146-586-1

### Format

152 × 229 mm / 6 × 9 in, 400 pages

### Illustrations

Color tables, photos and figures

### Series

Burleigh Dodds Series in Agricultural Science: no. 154

### BIC/THEMA classification

TDCT - Food & beverage technology,  
KNDF - Food manufacturing & related industries, RNFF - Food security & supply

### Distributors

**INGRAM** Publisher  
Services UK

Print books (exc. US and Canada)

eBooks (worldwide)

## New title information

# Insects as alternative sources of protein for food and feed

Edited by: Adriana Casillas, Tebrio, Spain

### Endorsement:

“More than ever, efforts are needed to develop a global bioeconomy. Harnessing and industrializing insect biology will create opportunities for recycling organic side streams to generate materials of value while minimizing environmental impacts. Such systems are being developed in Global North and Global South Nations. This new book, which features contributions by experts working in both industry and academia, sets part of the foundation for the recognition and application of such practices.” (Professor Jeffery K. Tomberlin, Texas A&M University, USA)

### Description:

With significant concerns about the environmental impact of conventional crop and livestock production, there is a growing interest in utilising novel alternative sources of protein in both human and animal diets. Insects have long been consumed by an array of species, such as birds, fish and mammals, including humans.

*Insects as alternative sources of protein for food and feed* provides a comprehensive overview of the recent research undertaken in this rapidly-expanding area. The book reviews the production and application of black soldier flies, yellow mealworms and other insects as alternative protein sources in poultry, pig and fish feed, as well as their nutritional benefits and challenges that can arise as a result of their use.

Through its considered approach, the book explores how the safety of insect-derived protein can be ensured across the supply chain, as well as how we can optimise its use as a sustainable feed and food source which contributes to a more resilient food system.

### Key features:

- Reviews the nutritional benefits, applications and challenges of using protein from black soldier flies and yellow mealworms in poultry, pig and fish feed
- Considers recent advances in the development of mass breeding/rearing techniques for the major insect species used as food or feed
- Explores some of the key issues currently facing the sector, such as the need to ensure product safety, the development of effective extraction techniques and consumer attitudes towards eating protein derived from insects

### Audience:

University and other researchers in animal nutrition; companies involved in the manufacture of animal feed or animal nutrition services; government and other agencies regulating the animal feed sector; as well as farmers interested in utilising animal feed supplemented with insect-derived proteins

### Editor details:

**Adriana Casillas** is co-founder and CEO of Tebrio. Tebrio is Spain's first, award-winning, large-scale manufacturer of insect protein for food, feed, pet food and other applications. Collaborators with Tebrio include the Universities of Almería, Burgos and Granada. Adriana was also Vice-President of the International Platform of Insects for Food and Feed (IPIFF) from 2016-2021 and is currently President of IPIFF.

## Table of contents:

### Part 1 Production and applications of black soldier flies

- 1. Advances in substrate source composition for rearing black soldier fly larvae as a protein source: *Cecilia Lalander and Ivã Guidini Lopes, Swedish University of Agricultural Sciences, Sweden*;
- 2. Diseases affecting production of black soldier flies as a protein source: *Roberto Pereira, University of Florida, USA*;
- 3. Use of protein from black soldier flies in poultry feed: *Teun Veldkamp, Wageningen University, The Netherlands*;
- 4. Use of protein from black soldier flies in pig feed: *Heidi Hall, Anpario, UK*;
- 5. Use of protein from black soldier flies in fish feed: *Laura Gasco, University of Turin, Italy*;

### Part 2 Production and application of yellow mealworms and other insects

- 6. Advances in mass breeding/rearing techniques for yellow mealworms as a protein source: *David Deruytter, INAGRO, Belgium*;
- 7. Advances in nutrient/substrate sources/composition for rearing yellow mealworms as a protein source: *Riccardo Melis, Porto Conte Recherche, Italy*;
- 8. Diseases affecting production of yellow mealworms as a protein source: *Annette Brun Jensen, University of Copenhagen, Denmark*;
- 9. Use of protein from yellow mealworms in poultry feed: *Monnye Mabelebele, University of South Africa, South Africa*;
- 10. Use of protein from yellow mealworms in fish feed: *Enric Gisbert, IRTA, Spain*;
- 11. Advances in production of house flies as food and animal feed: *Vimal Selvaraj, Cornell University, USA*;
- 12. Advances in production of crickets as food and animal feed: *Chrysantus Tanga, icipe, Kenya*;

### Part 3 General issues in use of insect protein

- 13. Ensuring the safety of protein from insects: *Christina Nielsen-Leroux, INRA, France*;
- 14. Understanding and changing attitudes towards eating protein derived from insects: *Ashkan Pakseresht, Brunel University, UK*;
